DIMENSIONS & WEIGHTS - TYPE FSTM-4000
2-TON CAPACITY FREE STANDING RUNWAY
STRUCTURE FOR MOTORIZED CRANE - 20FT TOS

BEAM/COL. DETAIL

END VIEW

GENERAL NOTES:

- Runway rail is rectangular square bar welded to runway beam. Additional field welding is required at splice joints that overlap beam splices.
- Capacities shown are for One (1) Crane at rated capacity.
- Runway designed for MCC standard crane types: TRSGCH, TRSGWR, TRSGWD, or TRSGWS. Special or customer supplied cranes require review of structure for specific crane design
- For non-standard lengths, widths, or heights; use next larger structure and order with exact dimensions required.
- Structure kit includes: ACAD system installation drawing specific for order, all structural steel work per attached concept drawing, bolting hardware, anchoring hardware for 6" minimum floor thickness, and gray primer paint finish.
- Structure deflection is approximately 1/2" maximum in all directions. Please contact MCC if additional deflection control is required.
- Runway rail height "RH" is calculated for each structure for specific crane to be used. Formula: Rail Height RH = Clear Height (CH) - Crane Height (U)-3" clearance
- Minimum 6" reinforced concrete (min.4000psi) floor required for all structures.
- Base runway cell is a braced cell. Additional cells can be unbraced cell. Every other cell must be a braced cell. See "Cell Configuration Diagram" for layout scenarios.
